TMA DoD Pharmacoeconomic Center
Fort Sam Houston, TX

MTF Quarterly Webcast

LTC Stacia Spridgen
Director, DoD Pharmacoeconomic Center

Introduction

- Greetings from the PEC
- Purpose of the Quarterly MTF Webcast
- DCO Ground Rules
  - Type questions into DCO system
  - Put on mute, not on hold
  - Contingency plan if DCO system quits working

Review of P&T Activities

Dr David Meade, PharmD, BCPS
LtCol (Ret), BSC, USAF
Director, Clinical Operations

Nov 09 P&T Meeting

- **Designated NF**
  - **Drug Implementation**
  - **Interferon Beta-1b Injection (Extavia) 60days**
  - **Bupropion HBr ER tabs (Aplenzin) 60 days**
  - **Milnacipran tabs (Savella) 60 days**
  - **Oxybutynin Topical Gel (Gelnique) 60 days**
  - **Tapentadol tabs (Nucynta) 60 days**
  - **Tramadol ER tabs (Ryzolt) 60 days**
  - **Tadalafil tabs (Adcirca) 60 days**
- **Designated as Formulary**
  - **Sildenafil tabs (Revatio 20 mg)**
  - **Bupropion HCl ER tabs (Wellbutrin XL, gen)**
  - **Valsartan/Amlodipine/HCTZ tabs (Exforge HCT)**

Feb 10 P&T Meeting

- **Removed from the BCF**
  - **Hydrocodone/Acetaminophen 5 mg/500 mg**
  - **Telmisartan +/- HCTZ (Micardis, Micardis HCT)**
- **Added to the BCF**
  - **levonorgestrel 0.75 mg (Next Choice; generic Plan B)**

May 10 P&T Meeting

- **Insulins**
  - **Basal Insulins**
    - **Pens and vials**
  - **Other Insulins**
    - **Novo retained national contract**
    - **Pens and vials – BCF determination at next meeting**
- **Clotting Factors**
- **New Drugs: Embeda, Intunive, Twynsta, Edular, Valturna**
- **House Keeping**
  - **PDE-5 Inhibitors for ED – PA criteria for post-prostatectomy use**
  - **Exenatide (Byetta) – PA Criteria**
  - **Sumatriptan injection (Sumavel dose-pro) – QLs**
- **BAP : 25 March**
  - **http://www.tricare.mil/pharmacy/bap/mail.cfm**
- **Minute Signing: Mid April**

May 10 P&T Meeting

- **Lip1**
  - **Statins**
  - **Stain Combos**
  - **Niacin**
  - **Niacin Combos**
- **New Drugs in Already Reviewed Class**
  - **Onsolis**
  - **Sumavel**
- BPH
  - Flomax generic
  - Step therapy

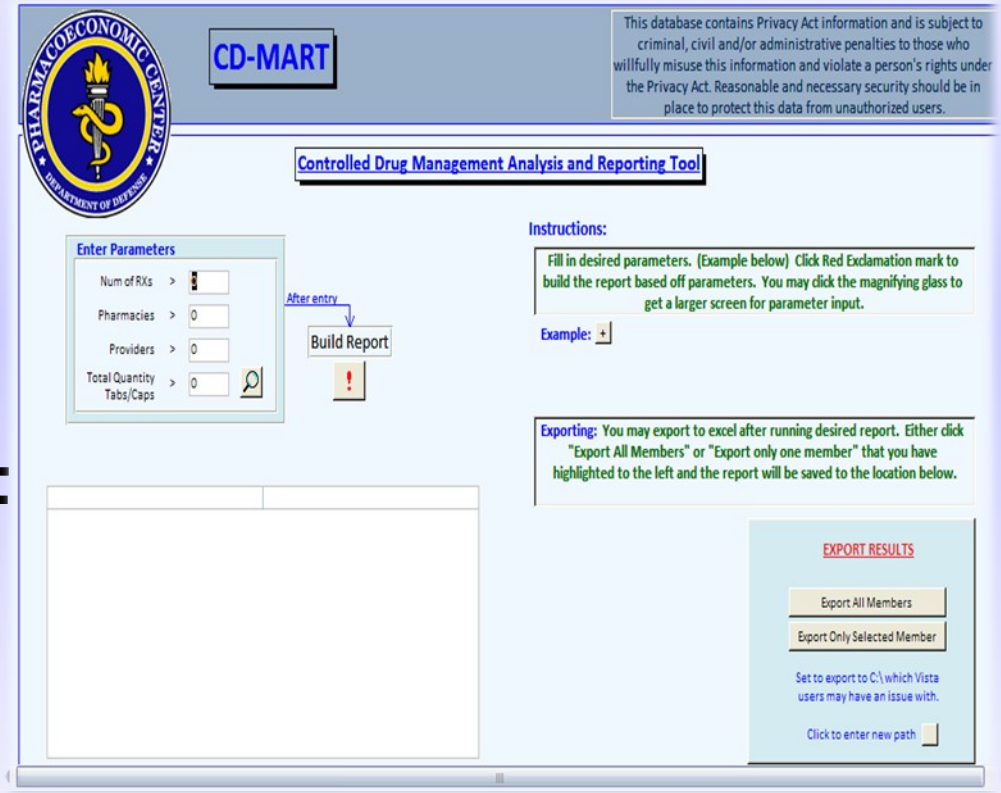
CD-MART

Hector Morales
Deputy Director, TMA Pharmacy Operations Center

Controlled Drug Management, Analysis and Reporting Tool (CD-MART)

Scope

- **Automated tool to assist providers in analyzing controlled prescription usage**
- **Menu-driven, Microsoft Access database with pre-set filtering parameters**
- **The Pharmacy Data Transaction Service (PDTS) is the data source**



CD-MART
This database contains Privacy Act information and is subject to criminal, civil and/or administrative penalties to those who willfully misuse this information and violate a person's rights under the Privacy Act. Reasonable and necessary security should be in place to protect this data from unauthorized users.
Controlled Drug Management Analysis and Reporting Tool
Enter Parameters
Num of RXs > 3
Pharmacies > 0
Providers > 0
Total Quantity Tabs/Caps > 0
After entry
Build Report
Instructions:
Fill in desired parameters. (Example below) Click Red Exclamation mark to build the report based off parameters. You may click the magnifying glass to get a larger screen for parameter input.
Example:
Exporting: You may export to excel after running desired report. Either click "Export All Members" or "Export only one member" that you have highlighted to the left and the report will be saved to the location below.
EXPORT RESULTS
Export All Members
Export Only Selected Member
Set to export to C:\ which Vista users may have an issue with.
Click to enter new path

Controlled Drug Management, Analysis and Reporting Tool (CD-MART) Target Population

- **Focus on beneficiaries enrolled to specific MTF, includes all enrollment locations under the MTF commander**

- **Data from within the MTF's 40-mile catchment area or all of the Department of Defense (DOD).**

- **All points of service**
- **controlled substances**

Controlled Drug Management, Analysis and Reporting Tool (CD-MART) Pre-Set Parameters

- **Four parameters which are local criteria based**
- **Number of Prescriptions (RXs), Pharmacies, Provider and Total Quantity Tablets/Capsules.**
- **User manipulates the parameters to produce a specific report**

Controlled Drug Management, Analysis and Reporting Tool (CD-MART) Report Manipulation

- **Setting parameters produces any one of the following reports or combinations there of :**
  - ✓ **All patients with more than “n” controlled substance prescriptions**
  - ✓ **All patients with controlled substance prescriptions from more than “n” pharmacies**
  - ✓ **All patients with controlled substance prescriptions from more than “n” providers**
  - ✓ **All patients with controlled substance prescription quantities exceeding “n” tablets/capsules**
- **Export to Excel report one patient or for all patients**

How To Order a CD-MART

TMOP
RxNET receives a facelift....
The PEC'S web forum for MHS health care providers. Our newly redesigned web forum can be reached at https://rxnet.army.mil.

The PEC Vision

The Department of Defense (DoD) PharmacoEconomic Center (PEC) is a customer oriented Center of Excellence implementing recognized state of the art pharmacoeconomic analysis for the purpose of improving readiness by increasing value, quality, and access to medical care and pharmacotherapy within the available resources of the Military Health System (MHS).

The PEC Mission

To improve the clinical, economic, and humanistic outcomes of drug therapy in support of the readiness and managed healthcare missions of the MHS.

PEC Activities

Pharmacoeconomic Analysis - The PEC monitors drug usage and cost trends and performs pharmacoeconomic analyses to support DoD formulary management, national pharmaceutical contracts, and clinical practice guidelines.

DoD Pharmacy & Therapeutics (P&T) Committee Support - The PEC provides extensive administrative and technical support for the DoD P&T Committee, which manages the DoD Basic Core Formulary (BCF) and the Mail Order Pharmacy Formulary.

The Pharmacy Operations Center (POC) - The POC supports users of the Pharmacy Data Transaction Service, a centralized prescription data repository that provides a single, comprehensive patient drug profile for DoD beneficiaries across the Military Health System.

Information Systems - The PEC helps in the development and management of information systems that support the provision of drug therapy and evaluation of the pharmacy benefit.

Pharmaceutical Contracts - The PEC works with the Defense Supply Center Philadelphia & the VA Pharmacy Benefits Management Strategic Health Group and National Acquisition Center to establish national pharmaceutical contracts.

Clinical Practice Guidelines - The PEC works with the VA/DoD Clinical Practice Guideline Workgroup to formulate the drug therapy components of clinical practice guidelines and associated metrics.

The PEC provides formulary management documents, presentations, and other resources to educate health care providers and other pharmacy benefit stakeholders about cost-effective drug therapy.

Pharmacy Operations Center (POC)- Military Treatment Facility (MTF) Information
Military Treatment Facility (MTF) Restriction Forms
Military Treatment Facility (MTF) providers may identify beneficiaries who may have "drug seeking behavior" or at high risk of harming themselves through accidental overdose of narcotics and/or other high-risk medications. Once identified, the provider may consider placing certain limits on the pharmacy benefit. One way to allow this limit is by utilizing the Pharmacy Data Transaction Service (PDTS). The provider has the option to restrict a beneficiary from receiving specific controlled or non-controlled medications from the TRICARE Mail Order Pharmacy (TMOP) and TRICARE Retail Pharmacy (TRRx) by utilizing the MTF Rx Restriction Form. This allows an MTF provider to communicate to the TMA Pharmacy Operations Center (POC) which type of restriction should be set for a beneficiary. The POC enters those restrictions into PDTS which provides a means to manage the pharmacy benefit access. In the near future, the provider will be able to restrict a beneficiary from receiving controlled or non-controlled medications at the provider level.
MTF Rx Restriction Request Form v4
The Community-based Rx Restriction Form is used to communicate prescription restrictions on specific active duty members assigned to a Community-based Warrior Transition Units (CBWTUs). The health care providers can restrict identified "drug seeking behavior" or high-risk Service Members to specific pharmacy(ies) and/or specific provider(s) in the PDTS system by utilizing the CBWTU Rx Restriction form.

Formulary Information - Basic/Extended Core Formulary (BCF) & (ECF...coming soon)

The **Basic Core Formulary (BCF)** is a list of medications required to be on formulary at all full-service Military Treatment Facilities (MTFs). BCF medications are intended to meet the majority of the primary care needs of DoD beneficiaries.

The **Extended Core Formulary (ECF)** includes medications in therapeutic classes that are used to support more specialized scopes of practice than those on the BCF. MTFs may choose whether or not to include an ECF therapeutic class on formulary, based on the clinical needs of its patients. However, if an MTF chooses to have an ECF therapeutic class on formulary, it must have all ECF medications in that class on formulary.

Medications are selected for the BCF or ECF because they offer significant clinical or cost-effectiveness advantages to MTFs compared to other medications in a therapeutic class. MTFs should utilize BCF or ECF medications to the greatest extent consistent with the clinical needs of their patients.

The **TRICARE Uniform Formulary** and **national pharmaceutical contracts** also affect what medications MTFs are allowed to have on formulary. The following table outlines MTF formulary requirements:

MTFs MUST have on formulary	MTFs MAY have on formulary	MTFs MUST NOT have on formulary
• All BCF medications • All ECF medications **if** the therapeutic class is on the MTF formulary	• Medications that are on the Uniform Formulary, but not on the BCF or ECF • Medications in classes not yet reviewed by the DoD P&T Committee for the Uniform Formulary, unless not allowed by a national pharmaceutical contract	• Medications designated as non-formulary under the Uniform Formulary • Medications that are not allowed on MTF formularies due to a **national pharmaceutical contract**. Contracts currently exist for: statins, LHRH agonists, fluoroquinolones, and triptans

The DoD P&T Committee is reviewing therapeutic classes for the UF on a class by class basis. For information on classes to be reviewed at upcoming meetings, please visit the **DoD P&T Committee schedule page**. The **DoD P&T Committee** makes recommendations regarding the formulary status of medications on the BCF, ECF, and UF to the Director, TRICARE Management Activity (TMA). The Director, TMA, makes final decisions after considering comments of the **Beneficiary Advisory Panel** (BAP).

References: HA policy 04-032, TRICARE Pharmacy Benefit Program Formulary Management, provides additional information about the BCF, ECF, and Uniform Formulary.

Definitions

- **Injectable** - Injectable dosage forms are not included on the BCF or ECF unless specifically noted. All strengths are included unless otherwise noted.
- **Oral** - Indicates all oral dosage forms and strengths will be provided unless otherwise noted.
- **OTC** (Over-the-counter) - OTC medications are not included in the BCF unless specifically noted.
- **Topicals** - Only the specified formulation(s) and strength(s) are included on the BCF or ECF.

Special Notes

- Listings are for the BCF unless specifically noted as being on the ECF. MTFs are required to have ECF medications on their formularies only if they have other medications in the ECF class on their formularies.
- Listings for classes already reviewed by the DoD P&T Committee also include:
  - Medications designated as non-formulary under the Uniform Formulary. MTFs are not allowed to have these medications on their formularies.
  - Medications on the Uniform Formulary (UF), but not on the BCF or ECF. MTFs are not required to have any of these medications on formulary, but may choose to add one or more depending on local needs.
- Brand names are provided for reference purposes and do not imply the recommendation of a specific product except when noted. For multi-source items, it is expected that the most favorably priced product will be used.
- Classifications for drugs classes not yet reviewed by the DoD P&T Committee are general groupings provided for convenience only and are subject to change.
- ***Newer antihistamines*** - **Effective 17 Oct 07, all MTFs must have at least one single ingredient agent (loratadine, cetirizine, or fexofenadine), including at least one dosage form suitable for pediatric use.**
- ***Low molecular weight heparins/heparinoids*** - **All MTFs must have at least one of the following products on the MTF formulary: dalteparin (Fragmin); enoxaparin (Lovenox); or tinzaparin (Innohep).**

Formulary Information - Basic/Extended Core Formulary (BCF) & (ECF...coming soon)
The Basic Core Formulary (BCF) is a list of medications required to be on formulary at all full-service Military Treatment Facilities (MTFs). BCF medications are intended to meet the majority of the primary care needs of DoD beneficiaries.
The Extended Core Formulary (ECF) includes medications in therapeutic classes that are used to support more specialized scopes of practice than those on the BCF. MTFs may choose whether or not to include an ECF therapeutic class on formulary, bas
on the clinical needs of its patients. However, if an MTF chooses to have an ECF therapeutic class on formulary, it must have all ECF medications in that class on formulary.
Medications are selected for the BCF or ECF because they offer significant clinical or cost-effectiveness advantages to MTFs compared to other medications in a therapeutic class. MTFs should utilize BCF or ECF medications to the greatest extent consistent w
the clinical needs of their patients.
The TRICARE Uniform Formulary and national pharmaceutical contracts also affect what medications MTFs are allowed to have on formulary. The following table outlines MTF formulary requirements:
MTFs MUST have on formulary
MTFs MAY have on formulary
MTFs MUST NOT have on formulary
All BCF medications
All ECF medications if the therapeutic class is on the MTF formulary
Medications that are on the Uniform Formulary, but not on the BCF or ECF
Medications in classes not yet reviewed by the DoD P&T Committee for the Uniform Formulary, unless not allowed by a national pharmaceutical contract
Medications designated as non-formulary under the Uniform Formulary
Medications that are not allowed on MTF formularies due to a national pharmaceutical contract. Contracts currently exist for: statins, LHRH agonists, fluoroquinolones, and triptans
The DoD P&T Committee is reviewing therapeutic classes for the UF on a class by class basis. For information on classes to be reviewed at upcoming meetings, please visit the DoD P&T Committee schedule page. The DoD P&T Committee makes
recommendations regarding the formulary status of medications on the BCF, ECF, and UF to the Director, TRICARE Management Activity (TMA). The Director, TMA, makes final decisions after considering comments of the Beneficiary Advisory Panel (BA
References: HA policy 04-032, TRICARE Pharmacy Benefit Program Formulary Management, provides additional information about the BCF, ECF, and Uniform Formulary.
Definitions
Injectable - Injectable dosage forms are not included on the BCF or ECF unless specifically noted. All strengths are included unless otherwise noted.
Oral - Indicates all oral dosage forms and strengths will be provided unless otherwise noted.
OTC (Over-the-counter) - OTC medications are not included in the BCF unless specifically noted.
Topicals - Only the specified formulation(s) and strength(s) are included on the BCF or ECF.
Special Notes
Listings are for the BCF unless specifically noted as being on the ECF. MTFs are required to have ECF medications on their formularies only if they have other medications in the ECF class on their formularies.
Listings for classes already reviewed by the DoD P&T Committee also include:
Medications designated as non-formulary under the Uniform Formulary. MTFs are not allowed to have these medications on their formularies.
Medications on the Uniform Formulary (UF), but not on the BCF or ECF. MTFs are not required to have any of these medications on formulary, but may choose to add one or more depending on local needs.
Brand names are provided for reference purposes and do not imply the recommendation of a specific product except when noted. For multi-source items, it is expected that the most favorably priced product will be used.
Classifications for drugs classes not yet reviewed by the DoD P&T Committee are general groupings provided for convenience only and are subject to change.
Newer antihistamines - Effective 17 Oct 07, all MTFs must have at least one single ingredient agent (loratadine, cetirizine, or fexofenadine), including at least one dosage form suitable for pediatric use.
Low molecular weight heparins/heparinoids - All MTFs must have at least one of the following products on the MTF formulary: dalteparin (Fragmin); enoxaparin

TMOP
RxNET receives a facelift....
The PEC'S web forum for MHS health care providers. Our newly redesigned web forum can be reached at https://rxnet.army.mil.

The PEC Vision

The Department of Defense (DoD) PharmacoEconomic Center (PEC) is a customer oriented Center of Excellence implementing recognized state of the art pharmacoeconomic analysis for the purpose of improving readiness by increasing value, quality, and access to medical care and pharmacotherapy within the available resources of the Military Health System (MHS).

The PEC Mission

To improve the clinical, economic, and humanistic outcomes of drug therapy in support of the readiness and managed healthcare missions of the MHS.

PEC Activities

Pharmacoeconomic Analysis - The PEC monitors drug usage and cost trends and performs pharmacoeconomic analyses to support DoD formulary management, national pharmaceutical contracts, and clinical practice guidelines.

DoD Pharmacy & Therapeutics (P&T) Committee Support - The PEC provides extensive administrative and technical support for the DoD P&T Committee, which manages the DoD Basic Core Formulary (BCF) and the Mail Order Pharmacy Formulary.

The Pharmacy Operations Center (POC) - The POC supports users of the Pharmacy Data Transaction Service, a centralized prescription data repository that provides a single, comprehensive patient drug profile for DoD beneficiaries across the Military Health System.

Information Systems - The PEC helps in the development and management of information systems that support the provision of drug therapy and evaluation of the pharmacy benefit.

Pharmaceutical Contracts - The PEC works with the Defense Supply Center Philadelphia & the VA Pharmacy Benefits Management Strategic Health Group and National Acquisition Center to establish national pharmaceutical contracts.

Clinical Practice Guidelines - The PEC works with the VA/DoD Clinical Practice Guideline Workgroup to formulate the drug therapy components of clinical practice guidelines and associated metrics.

The PEC provides formulary management documents, presentations, and other resources to educate health care providers and other pharmacy benefit stakeholders about cost-effective drug therapy.
